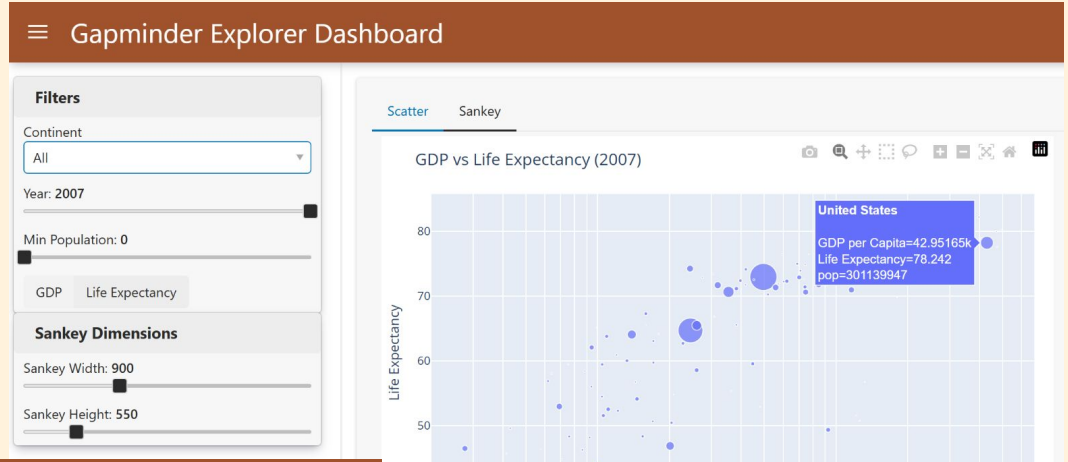
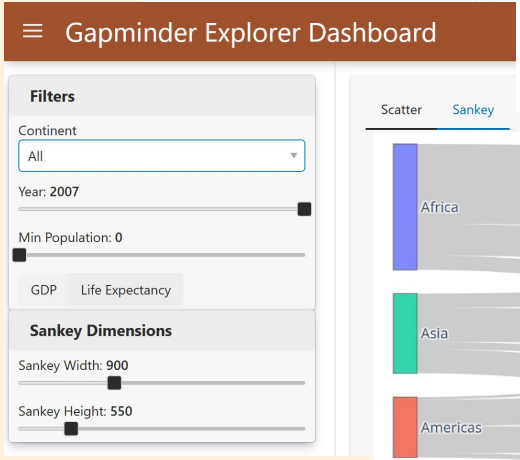
Gapminder combines economics and global health across countries and time. I built an interactive dashboard so users can quickly explore how GDP per capita relates to life expectancy, and how patterns differ by continent.



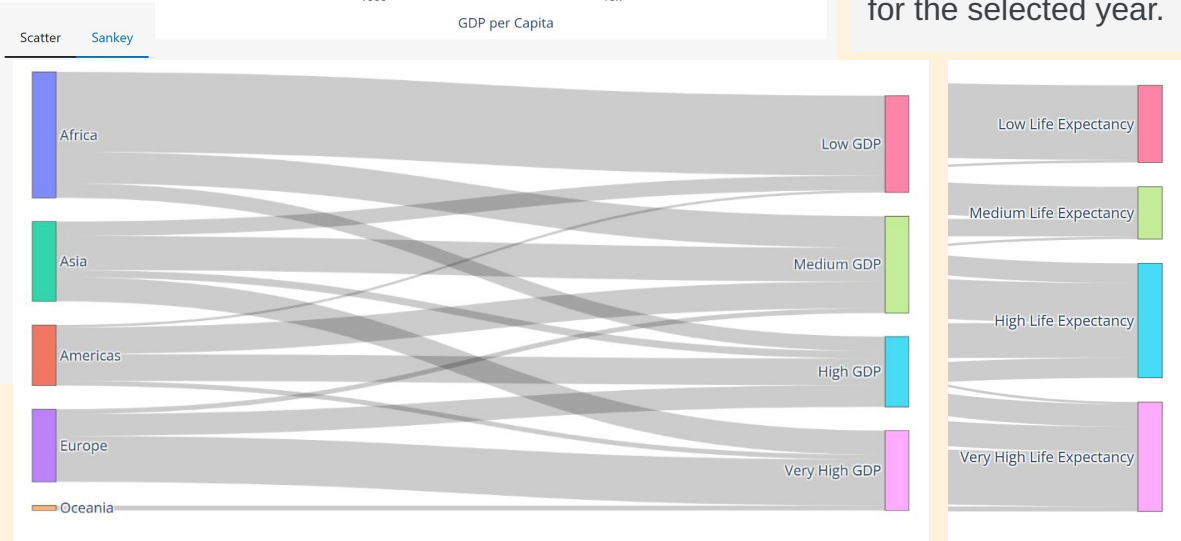
Scatter plot shows the relationship between GDP and life expectancy, while highlighting outliers and representing population with bubble size.

Sankey diagram summarizes how countries in each continent fall into GDP or Life Expectancy groups for the selected year.

Filters by continent, year, and minimum population



Switch Sankey grouping between GDP and Life Expectancy



Adjustable Sankey width/height to improve readability
